

Cultural Resources Services for Power Generation & Transmission

Increasingly, federal, state, and municipal governments are recognizing the economic benefits of identifying and preserving cultural resources, which includes archaeological and historical sites, structures, or objects. Many are coming to come to terms with contentious histories and are requiring consideration of cultural resources prior to permitting or project authorization.

Our cultural resources professionals have the local knowledge and regional experience to help guide you through municipal, state, and/or federal regulatory agencies.

Long standing working relationships with these agencies allow us to guide your projects efficiently and successfully through the regulatory process.

Terracon's staff have advanced training and/or degrees in sub-fields such as, biological archaeology, geoarchaeology, human osteology, and faunal analysis. In fact, some of our staff have been utilized as subject matter experts for television programing, including the History, Science, and National Geographic Channels.

Terracon has conducted thousands of cultural resources investigations across the continental US and the Caribbean. Our staff across the US is ready to mobilize to anywhere on the globe.
