

Wetlands/Waters Delineation and Permitting for Power Generation & Transmission

Terracon has a network of wetland scientists and permitting experts nationwide with experience in Federal, State, and Local programs here to support our client's needs.

Terracon has completed hundreds of wetlands and Waters of the United States (WOTUS) delineation and permitting projects nationwide on sites ranging from less than one acre to tens of thousands of acres, and linear projects from less than one mile to hundreds of miles in length. Cost-effective studies are a great tool to understand wetland and stream constraints and permitting constraints on a proposed project site or transmission route. Terracon's relationships with the regulatory agencies and knowledge of the programs help save time and money.
