

Facilities Consulting | Façade Assessments

Façade Challenges

Building facades are susceptible to the environment's natural effects. Wind, water, temperature, and movement impact the exterior's condition and alter the components' ability to perform over time. Additionally, improper design and installation often add to the facade deterioration rate. The results are water and air infiltration, component degradation, and interior damages, impacting the overall comfort, performance, and safety of the building.

Cities nationwide have enacted facade ordinances outlining specific periodic assessment requirements of building facades for the public's protection based on a history of falling debris from facades that were not effectively maintained - a true life-safety issue.

Historic buildings and their facades are another unique area requiring an owner's attention in order to maintain and restore these systems due to local, state, and/or federal preservation regulations.

Experience and Expertise

Terracon's building enclosure commissioning professionals specialize in facade assessment on a myriad of system and building types. We understand the complexities associated with building facade issues. This enables us to provide holistic solutions to restore and extend building facade service life.

We bring our expertise in remedial design and administration to rehabilitate and restore facade performance.

We develop feasible options for the owner's consideration based on technical evidence as well as their future plans for the building. We strive to provide reasonable and effective solutions to restore asset value while mitigating any poor performance and safety-related issues.

Our in-house, specially-trained rope access personnel are able to work on building exteriors that have difficult-to-reach areas without the use of scaffolding. This capability not only reduces cost, but also expedites the assessment process, often eliminating the need for elevated lift units, swing stages, or davit certifications.

Services We Provide

Terracon provides the following services to assist building owners with their facade requirements:

- **Property Condition Assessments (PCA)**
 - Capital Reserve Analysis
 - Accessibility (ADA/FHAA)
- **Facility Asset Management (FAM)**
 - Facility and Infrastructure Inventory
 - Life Cycle Planning/Service Life Projections
 - Repair and Replacement
 - Budget Forecasting
- **Construction Consulting Services (CCS)**
 - Document and Cost Reviews
 - Construction Progress/Pay Application Review
