**Michelle McIntyre, MPH, CIH, CSP**  
EHS Lead - Health and Safety Compliance  
(915) 260-4910  
[michelle.mcintyre@terracon.com](mailto:michelle.mcintyre@terracon.com)

**Compliance with Confidence**  
Explore your path with a trusted partner

# We partner across the lifecycle of your project to integrate EHS requirements early.

## Site Selection

*Gain clarity early to make informed, confident decisions.*

During site selection, uncertainty around regulatory requirements, site conditions, and environmental constraints can significantly affect project feasibility. Terracon helps clients evaluate risk early by aligning permitting strategy, due diligence, and environmental assessments with long-term project goals.

## Design & Integration

*Integrate EHS requirements early to reduce risk and streamline approvals.*

Once a site or facility is selected, environmental, health, and safety considerations must be designed into the project – not addressed later. Terracon collaborates with project teams to integrate EHS requirements early, helping prevent redesigns, delays, and permitting challenges.

## Construction

*Real-time EHS support that keeps projects moving.*

Environmental, health, and safety compliance requirements often apply well before operations begin. Terracon provides practical, on-site, and remote EHS support during construction to help project teams meet permit obligations while maintaining schedule and momentum.

## Operational EHS Management

*Sustainable compliance that supports long-term performance.*

Once a facility is operational, compliance becomes continuous and may become increasingly complex – particularly as operations expand or change. Terracon helps clients build sustainable EHS programs that protect workers, maintain environmental compliance, and support operational excellence.

## Services for your entire EHS journey.

### Environmental

- Regulatory applicability and permitting strategy
- Multi-media permitting and compliance (air, water, wastewater, solid/hazardous waste)
- Environmental management systems and audits
- Regulatory inspection assistance and negotiations
- Engineering design and evaluation
- ESG strategy and disclosures

### Occupational Health

- Occupational exposure assessments and monitoring
- Industrial hygiene evaluations to identify, assess, and manage worker health risks
- Indoor and building-related environmental quality assessments
- Ventilation and environmental control evaluations
- Respiratory protection and personal protective equipment (PPE) program support
- Ergonomics and human factors assessments
- Occupational health program review, auditing, and improvement support

### Safety

- Workplace and operational safety consulting
- OSHA compliance evaluations and gap assessments
- Safety program development and implementation support
- Job hazard analyses (JHAs) and task-based risk assessments
- Incident investigation and root cause analysis
- Training, competency, and workforce safety support
- Onsite and field safety consulting and oversight

### EHS Management

- EHS compliance and risk assessments
- Regulatory compliance and audit support
- EHS management systems and governance (ISO 14001/45001)
- Training and workforce development
- Regulatory reporting and documentation support
- Litigation and expert support
- Sustainability and ESG advisory services
